

The new ASSA ABLOY dock leveler range

ASSA ABLOY
Entrance Systems

Designed for quality, engineered for efficiency

Experience a safer
and more open world

Designed for the toughest environments

Where safety, efficiency and durability are vital

Loading bays are beehives of activity, with people, goods and vehicles constantly moving in all directions. They are environments where hardware must be depended upon to deliver, now and long into the future – and why this new range of dock levelers is designed with quality in every detail.

Experience a new level of uptime and operational efficiency

Because this new range of dock levelers is IoT-enabled, it opens up a new era of opportunities for your docking operations.

Through our digital platform, ASSA ABLOY *Insight*, you can boost the uptime and reliability of your dock leveler by monitoring wear and tear – and make better sustainable decisions using data and analytics.

And in combination with our IoT-enabled docking doors, you can enjoy the convenience of remotely monitoring the status of any and all your docking stations anytime, anywhere.

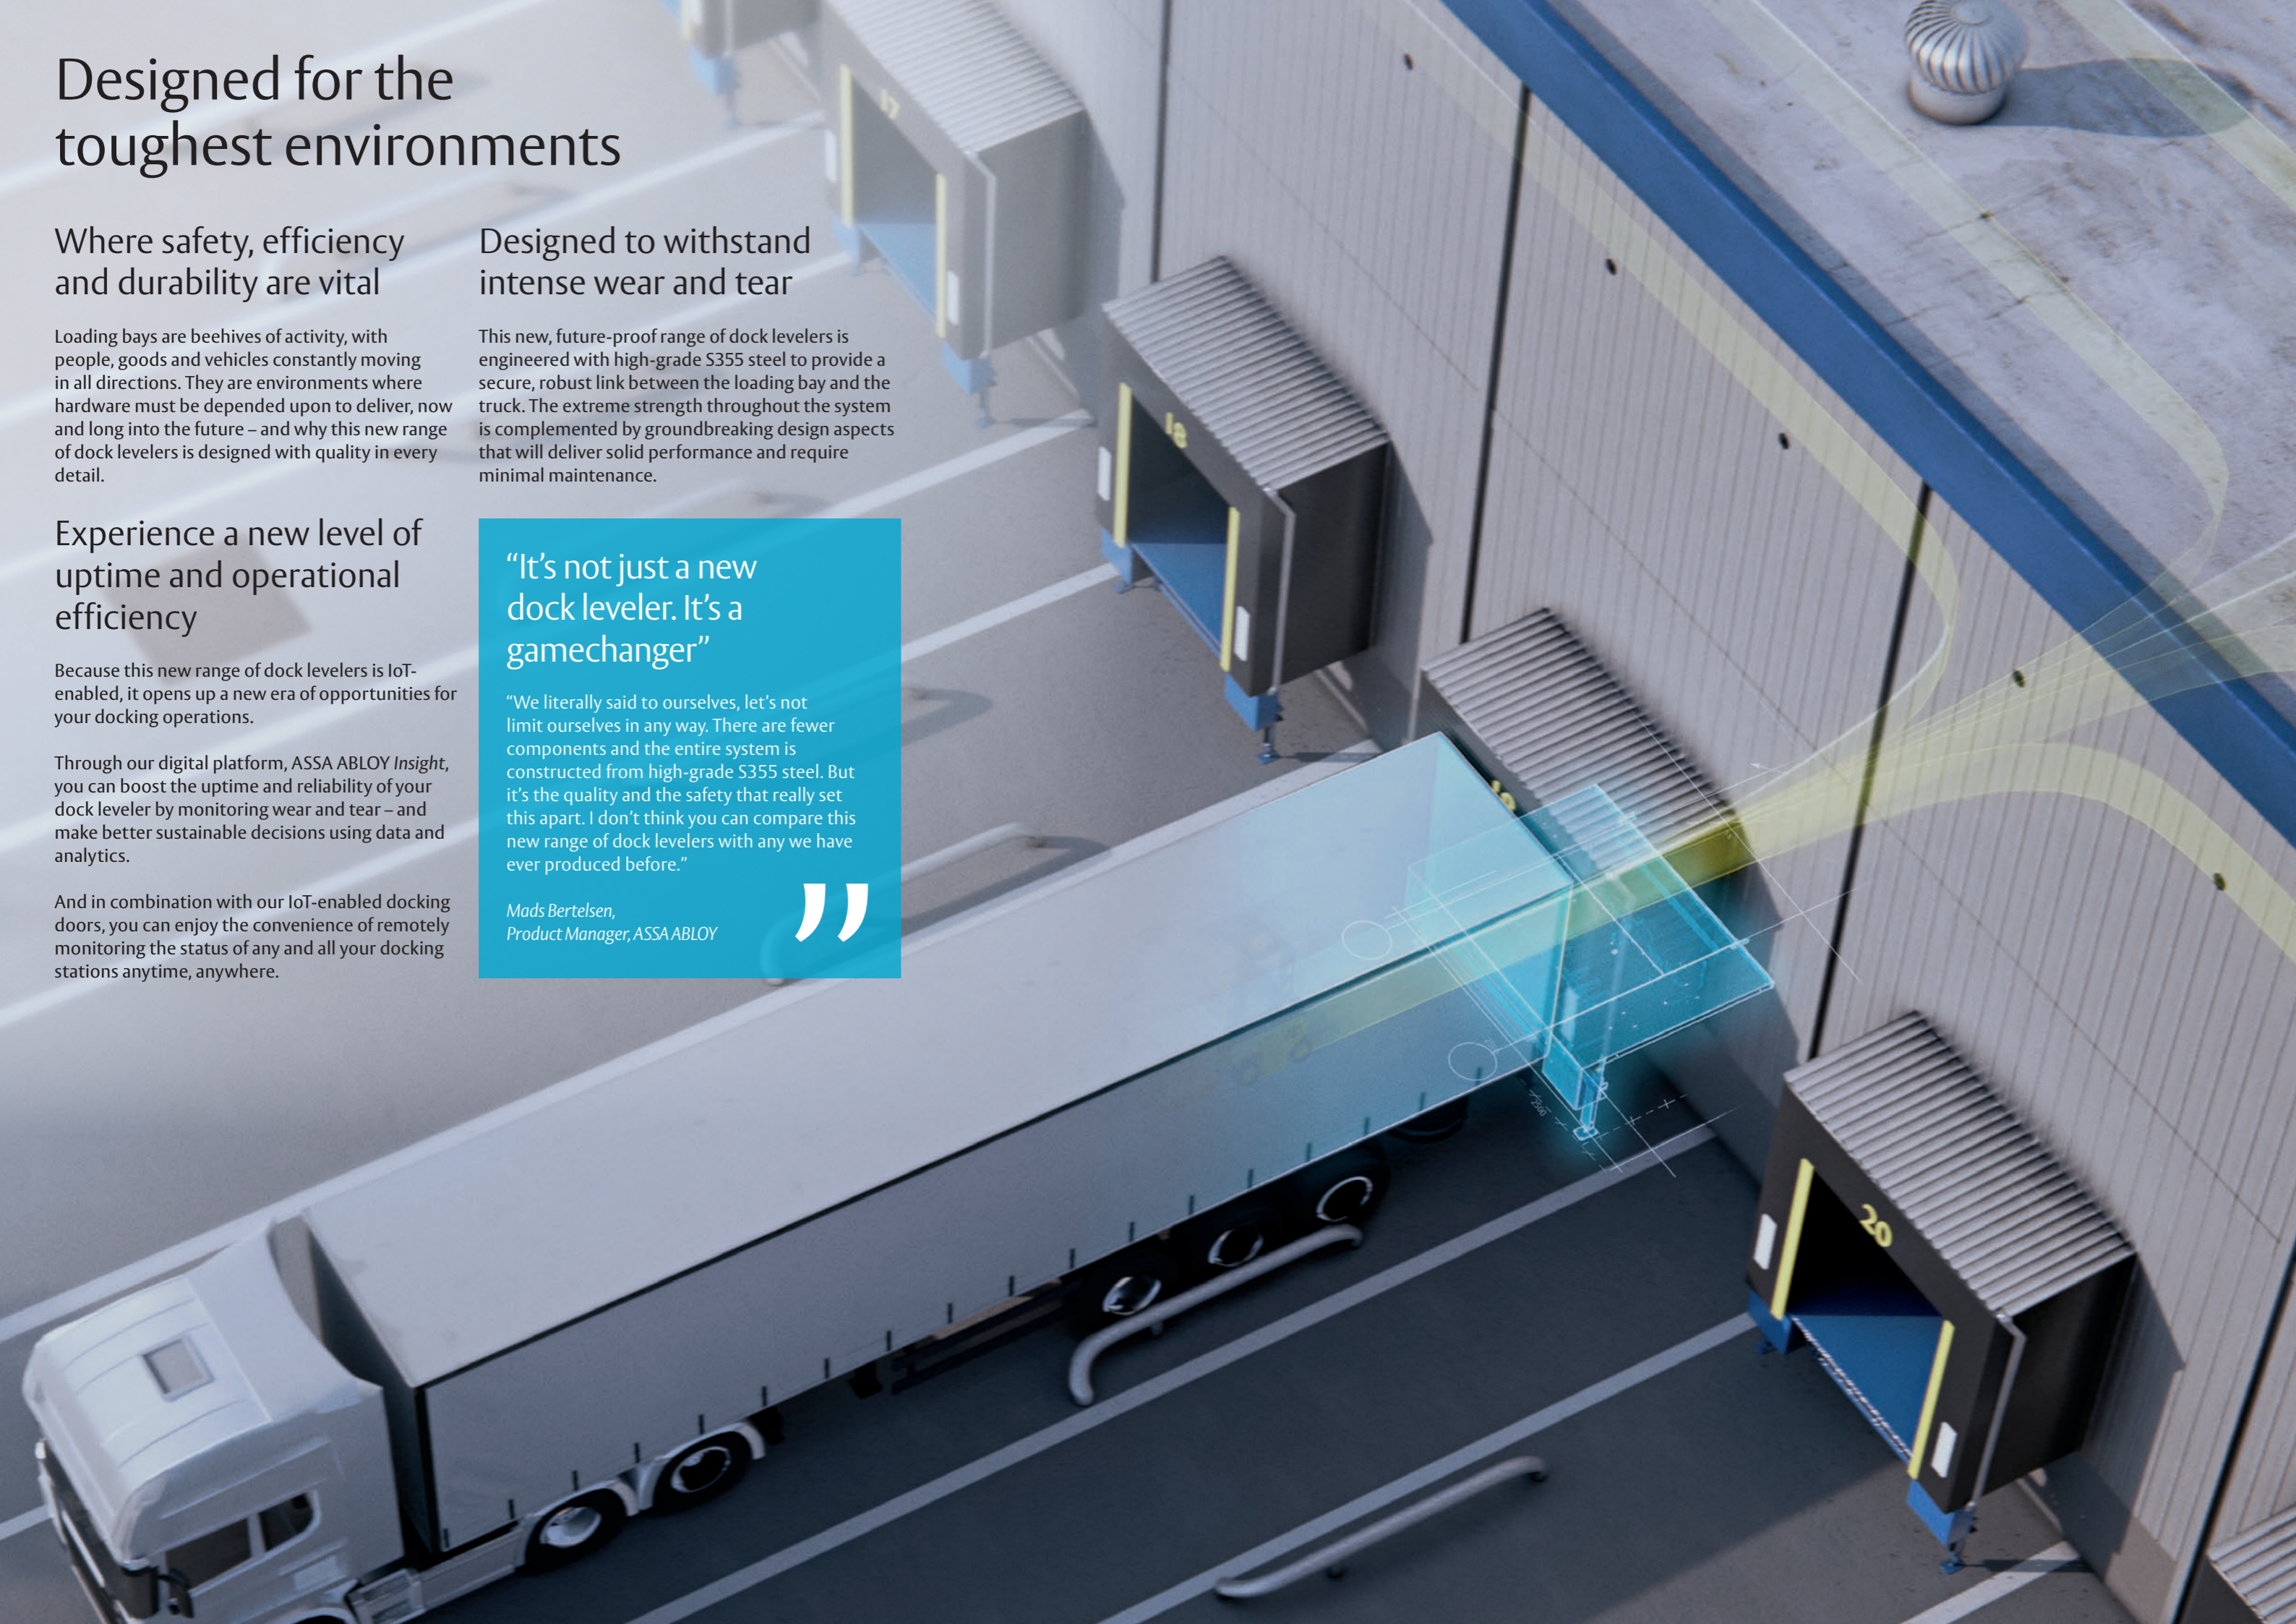

Designed to withstand intense wear and tear

This new, future-proof range of dock levelers is engineered with high-grade S355 steel to provide a secure, robust link between the loading bay and the truck. The extreme strength throughout the system is complemented by groundbreaking design aspects that will deliver solid performance and require minimal maintenance.

“It’s not just a new dock leveler. It’s a gamechanger”

“We literally said to ourselves, let’s not limit ourselves in any way. There are fewer components and the entire system is constructed from high-grade S355 steel. But it’s the quality and the safety that really set this apart. I don’t think you can compare this new range of dock levelers with any we have ever produced before.”

Mads Bertelsen,
Product Manager, ASSA ABLOY

This is smart robustness

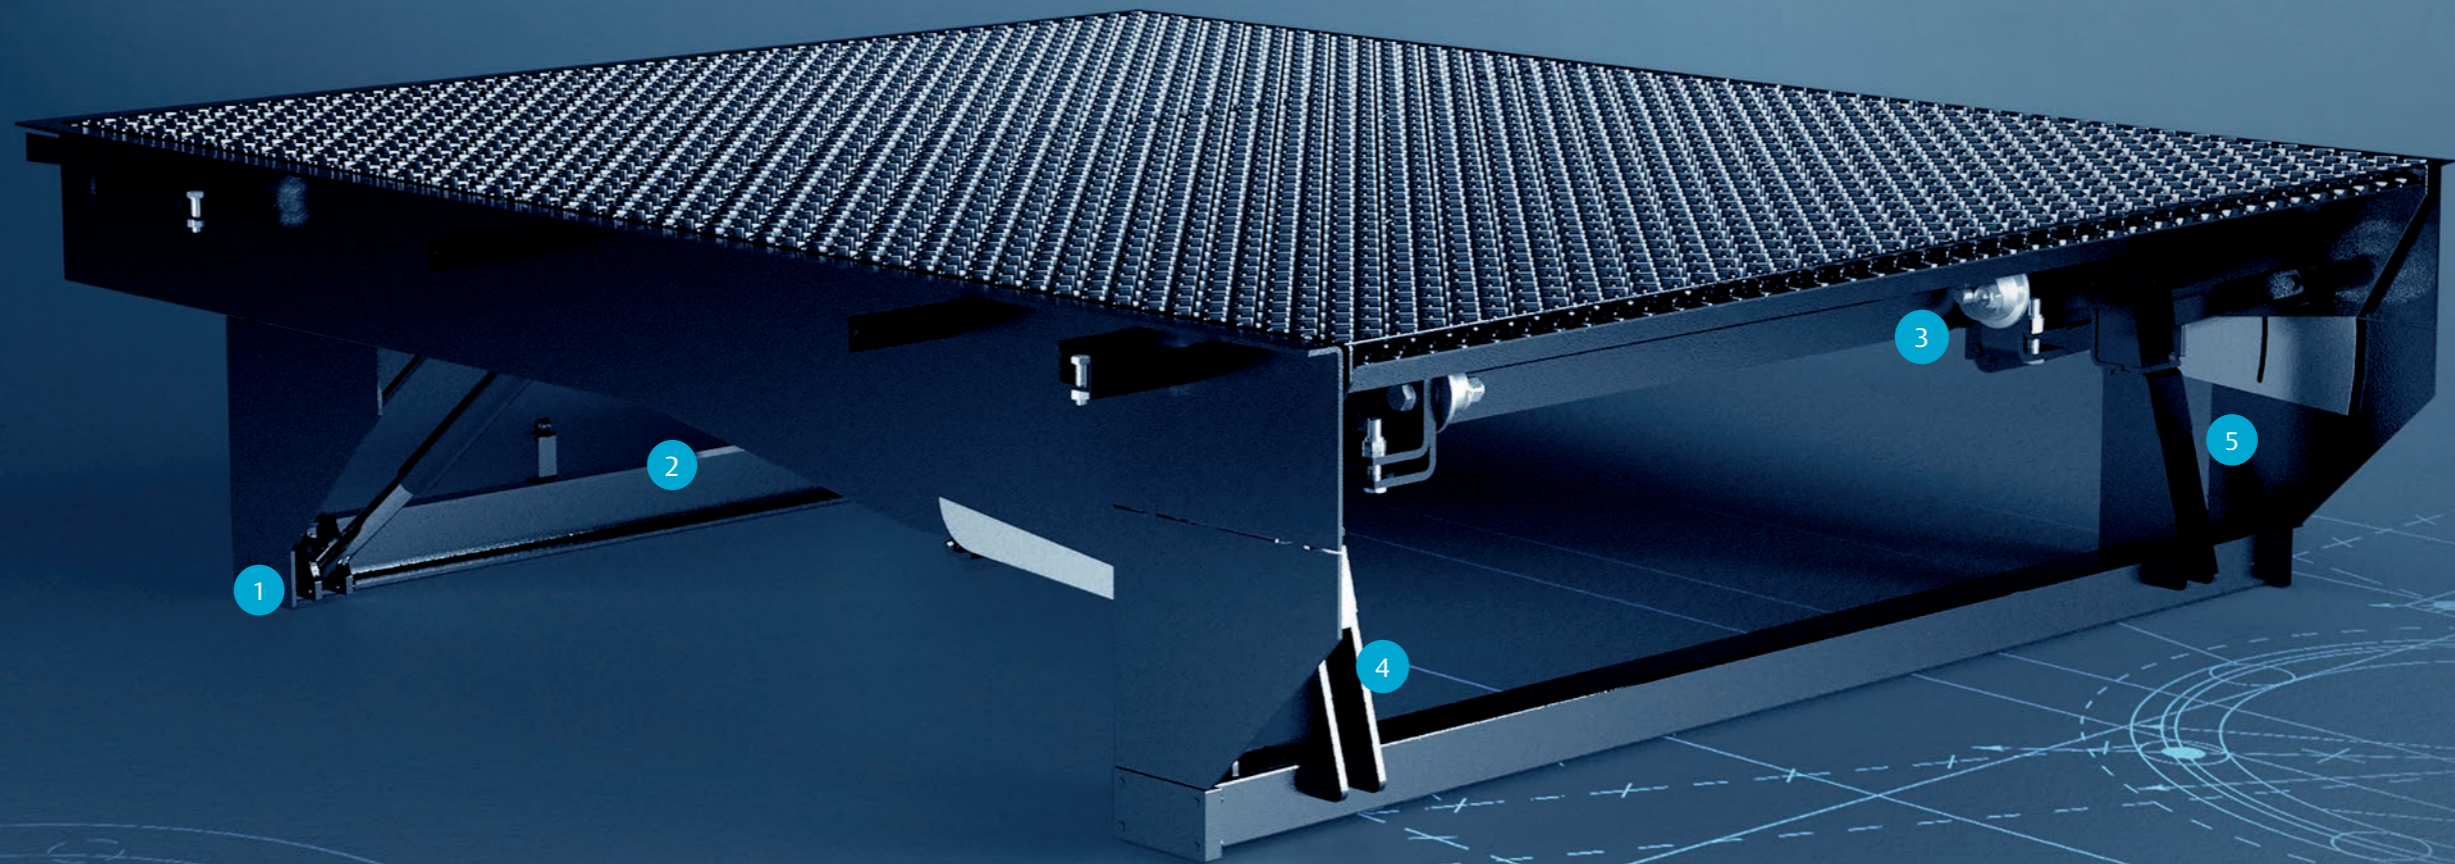

Designed to be integrated seamlessly into your loading bay operations – and protect your workers from loading bay dangers – this new range of dock levelers combines connectivity and intelligent engineering with hardwearing durability. We call it smart robustness.

High-grade S355 steel throughout

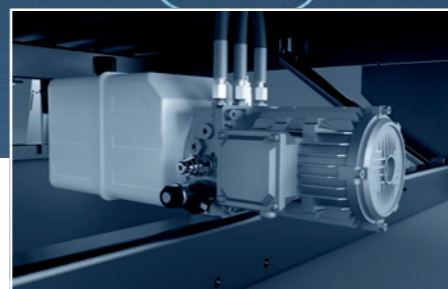

We refuse to compromise on quality or durability and use only high-grade S355 steel throughout the range to safeguard high performance and the longest possible lifetime for your docking operations.

Fewer components, easier maintenance

This new range of dock levelers is designed with fewer components to minimize the potential for parts needing replacing. The result is a system built to deliver dependable performance and require minimal maintenance.

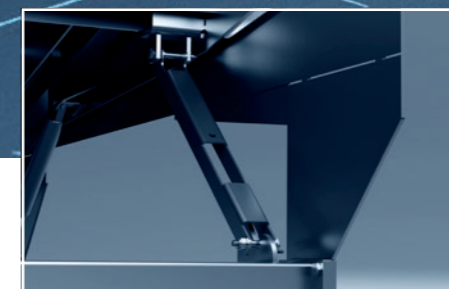

1. Lift cylinder fixed directly on the shaft to meet the highest safety requirements

2. Hydraulic housing reducing vibrations during loading to significantly improve durability and accessibility for service inspection

3. Dual lip guide rollers deliver smooth, precise movement during extension and retraction

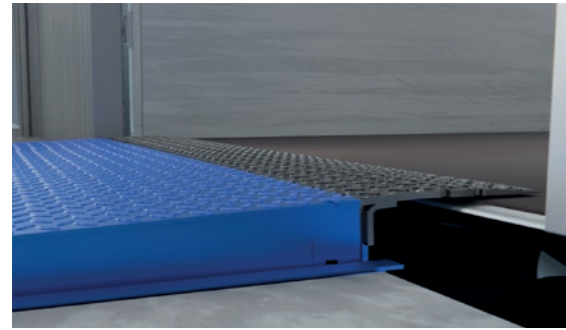

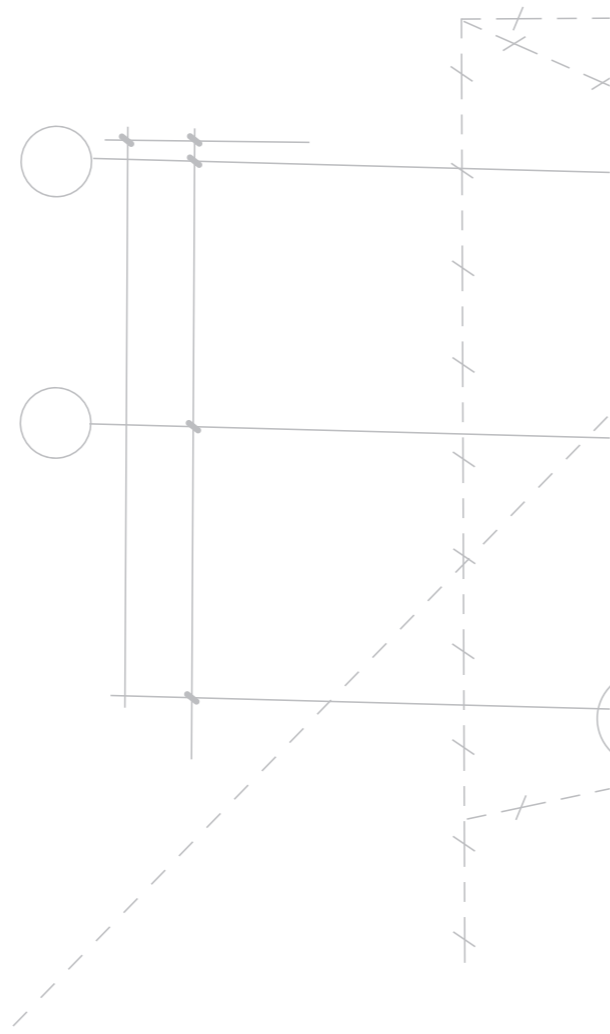

4. Self-positioning safety props improve both operational and maintenance safety, and can be put in position by one person in two simple steps

5. Robust resting position support ensures the entire system is stable and secure while not in use

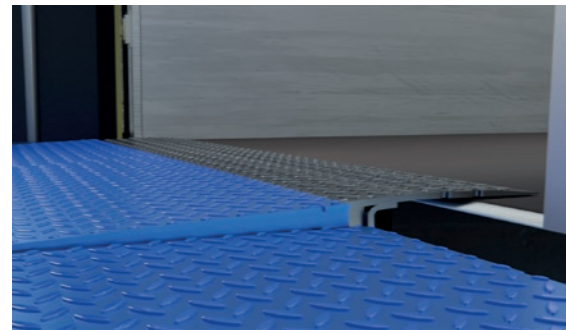

One tough dock leveler range for any application

Available in both teledock and swingdock versions – and for both interior loading bay or exterior load house installation – this new range has the versatility to suit your specific loading bay needs.

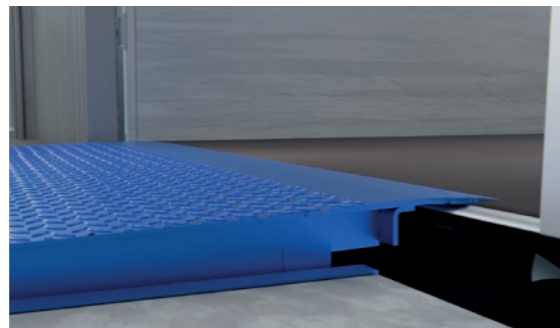

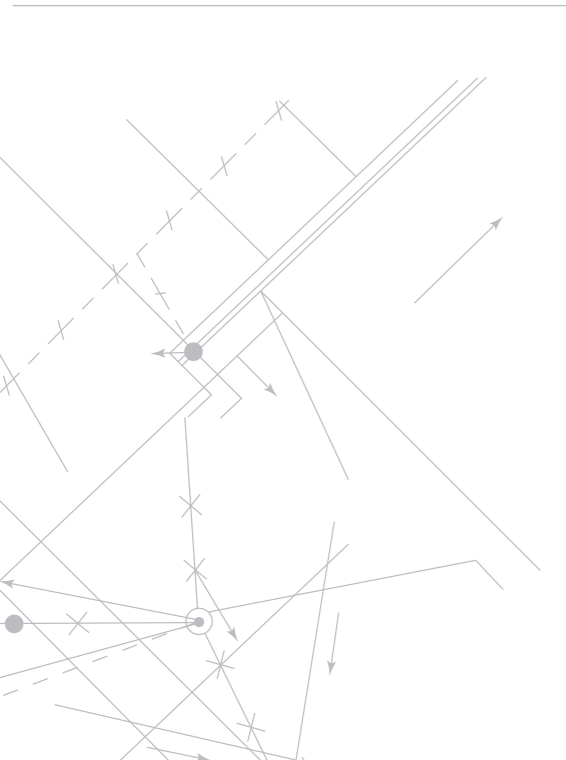

Teledock

ASSA ABLOY DL6220T
The telescopic lip brings flexibility to adjust on the available space of the truck bed

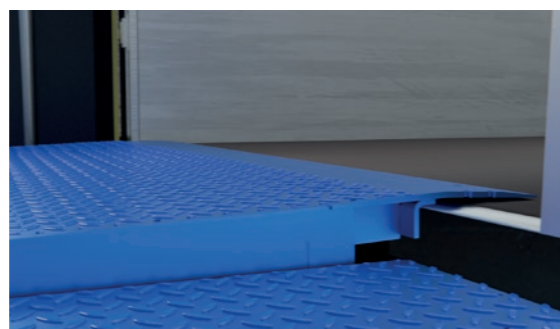

Teledock Autodock

ASSA ABLOY DL6220TA
Telescopic lip and installed in a load house to provide space-saving in your building

Swingdock

ASSA ABLOY DL6210S
The swingdock model has a bent, bevelled lip for smooth transition to truck bed and suit all type of handling equipment

Swingdock Autodock

ASSA ABLOY DL6210SA
Bent, bevelled lip and installed in a load house to provide space-saving in your building

Extend its lifetime and control your costs

Your own tailored service agreement puts you in complete control of your ASSA ABLOY systems, your processes and your costs.

With a range of optional digital services, we are also able to take preemptive measures to protect the smooth running of your system and ensure service never disrupts your business.

The starting point is to decide whether your agreement should focus on maintaining your system or optimizing its performance throughout its lifetime. From there we can tailor your own service agreement together.

Preventative maintenance and inspection service as standard. Digital services optional.

Our most advanced and comprehensive service agreement, including a range of digital services.

The ASSA ABLOY Group is the global leader in access solutions.
Every day, we help billions of people experience a more open world.

ASSA ABLOY
Entrance Systems

ASSA ABLOY Entrance Systems provides solutions for efficient and safe flow of goods and people. Our offering includes a wide range of automated pedestrian, industrial and residential doors, loading dock equipment, perimeter fencing and service.
